

Spin Offs

AixCom GmbH was a software company providing solutions for analysis, design, cost optimisation and performance evaluation of mobile and fixed networks. AixCom is based in Aachen, Germany and was established in January 1998 as a spin-off of the Department of Communication Networks of RWTH Aachen University

AixCom provided solutions for the most efficient use of mobile and fixed networks. The company has developed software tools, which drastically reduce the capital and operational expenditure of its customers' networks. AixCom tools optimize cost, end-to-end performance, and end-to-end quality of existing and forthcoming mobile networks, such as GSM incl. GPRS and EDGE, UMTS, WLAN (IEEE 802.11, HIPERLAN/2), and TETRA.

P3 Solutions was established in December 1999 as a spin-off of the Department of Communication Networks of Aachen University of Technology. In a rapidly changing and growing telecommunication market, many new services are getting designed and marketed at the interface between the internet and the cellular phone world. Very often, though, lacking knowledge about inherent properties of each other's side makes this integration a difficult, time- and resource-consuming process for the involved parties. The operators of mobile radio networks are faced the peculiarities of TCP/IP, whilst the suppliers wonder about the unexpected characteristics of the radio interface.

With highly skilled engineering, renown consulting capabilities, and backed up by a strong scientific foundation, P3 Solutions has intimate knowledge of both worlds and designs tools and test procedures to help analyse and improve the efficiency of mobile data services for the operators and consequently also the end users.
